**Message from the Guest Editors**

We are glad to announce the Special Issue “Zoonoses Associated with Animal Assisted Interventions: An Interdisciplinary Perspective”, to be published on *IJEPRH*. Recently, we have witnessed a rapid accumulation of the scientific knowledge in many areas of work within the Animal Assisted Interventions (AAIs). However, the zoonotic risks resulting from the close patient-animal interactions that form the base of such interventions, are still poorly explored. This special issue will address this gap.

Papers highlighting any aspect of infectious (bacterial, viral, or parasitic) and behavioral zoonoses in this field are welcome and will be taken into consideration for the publication. We encourage authors of research or review articles to submit their material to this Special Issue. Papers will be peer-reviewed according to the journal’s criteria and accepted papers will be published in IJERPH as soon as practicable. All the papers will be also listed together as a Special Issue.

Deadline for manuscript submissions:  
**31 March 2021**

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.
